1 Understanding OSHA & Who It Applies To

What is OSHA? The Occupational Safety and Health Administration (OSHA) is a federal agency under the U.S. Department of Labor. OSHA's mission is to ensure safe and healthful working conditions by setting and enforcing standards and providing training, outreach, education, and assistance.

Who Does OSHA Cover?

OSHA covers **most private sector employers and workers** in all 50 states, the District of Columbia, and other U.S. jurisdictions. Coverage is provided either directly by federal OSHA or through an OSHA-approved state program.

Covered	Not Covered
Private sector employers with 1+ employees	Self-employed individuals (no employees)
Construction companies	Immediate family members of farm employers
Manufacturing facilities	Workers protected by other federal agencies (e.g., MSHA for mining)
Retail businesses	State and local government workers (in non-state-plan states)
Healthcare facilities	
Restaurants & food service	
Offices and professional services	

The General Duty Clause (Section 5(a)(1))

Even if OSHA doesn't have a specific standard for a hazard in your workplace, you are still required under the General Duty Clause to provide a workplace "free from recognized hazards that are causing or are likely to cause death or serious physical harm." This is the catch-all provision — you can be cited under this even without a specific rule.

△ **Key Point:** There is no minimum employee count that exempts you from OSHA. If you have even ONE employee, OSHA applies to you. However, employers with 10 or fewer employees in low-hazard industries are partially exempt from routine recordkeeping requirements (OSHA 300 logs).

OSHA Penalty Amounts (2026)

Violation Type	Maximum Penalty Per Violation
Serious / Other-Than-Serious / Posting	\$16,550
Failure to Abate	\$16,550 per day
Willful or Repeated	\$165,514

4,700+

WORKPLACE FATALITIES PER YEAR (U.S.)

\$4.7B

ANNUAL COST OF OSHA PENALTIES

General Workplace Safety Checklist

Use this checklist to assess the overall safety of your workplace. Walk through your facility with this list in hand and check off each item. Any unchecked item needs immediate attention.

WALKING & WORKING SURFACES

- ☐ All floors are clean, dry, and free of slip/trip hazards
- ☐ Aisles and passageways are clear and at least 28 inches wide
- ☐ Floor holes and openings are covered or guarded
- ☐ Wet floor signs are available and used when needed
- ☐ Stairways have handrails on open sides and are well-lit
- ☐ Elevated platforms (4+ feet) have guardrails with top rails, mid rails, and toeboards
- ☐ Ladders are in good condition and properly stored
- ☐ Non-slip mats are placed in areas prone to wetness

HOUSEKEEPING

- ☐ Workspaces are organized and free of unnecessary clutter
- ☐ Trash and waste is disposed of regularly
- ☐ Spills are cleaned up immediately
- ☐ Storage areas are organized with heavy items stored low
- ☐ Materials are stacked safely and securely
- ☐ Tools and equipment are stored properly after use

LIGHTING & VENTILATION

- ☐ All work areas have adequate lighting (minimum 30 foot-candles for offices, 50 for detailed work)
- ☐ Emergency lighting is functional and tested regularly

- ☐ Ventilation systems are working properly
- ☐ Indoor air quality is monitored (no excessive dust, fumes, or odors)
- ☐ Temperature is maintained at comfortable levels (68–76°F recommended)

ERGONOMICS

- ☐ Workstations are adjustable to fit individual employees
- ☐ Computer monitors are at eye level and arm's length away
- ☐ Chairs provide proper lumbar support
- ☐ Employees are trained on proper lifting techniques
- ☐ Repetitive motion tasks are rotated or broken up with rest periods
- ☐ Anti-fatigue mats are provided for standing workstations

RESTROOMS & BREAK AREAS

- ☐ Restrooms are clean, sanitary, and accessible
- ☐ Adequate number of restrooms for workforce size (1 per 15 employees minimum)
- ☐ Drinking water is available and clearly labeled
- ☐ Break areas are clean and separate from work hazards
- ☐ First aid supplies are accessible and stocked

3

Fire Safety Compliance Checklist

- ☐ Fire extinguishers are mounted, accessible, and within 75 feet of any employee
- ☐ Fire extinguishers are inspected monthly (visual) and annually (certified)
- ☐ Inspection tags on extinguishers are current and signed
- ☐ Employees know the location of the nearest fire extinguisher
- ☐ Employees are trained on fire extinguisher use (PASS method: Pull, Aim, Squeeze, Sweep)
- ☐ Exit routes are clearly marked with illuminated EXIT signs
- ☐ Exit routes are unobstructed at all times — never blocked by furniture, equipment, or storage
- ☐ Emergency exit doors open outward and are not locked from inside during operating hours
- ☐ Fire alarm system is tested regularly (monthly pull station tests, annual full system test)
- ☐ Sprinkler systems are inspected quarterly and heads are unobstructed (18-inch clearance)
- ☐ Flammable materials are stored in approved flammable storage cabinets
- ☐ No Smoking signs are posted near flammable storage areas
- ☐ Evacuation maps are posted and visible in all main areas
- ☐ Fire drills are conducted at least annually (quarterly recommended)
- ☐ Assembly point is designated and communicated to all employees
- ☐ Fire department phone number is posted at all phones

 **Pro Tip:** Create a monthly "Fire Safety Walk" where a designated employee checks all extinguishers, exits, and alarms. Document this walk — it's strong evidence of compliance during inspections.

Electrical Safety Checklist

- ☐ All electrical panels are accessible with 36 inches of clearance in front
- ☐ Electrical panels are labeled identifying each circuit
- ☐ No exposed wiring or frayed cords anywhere in the workplace
- ☐ Extension cords are used only temporarily, never as permanent wiring
- ☐ Power strips are not daisy-chained (plugged into each other)
- ☐ All outlets near water sources have Ground Fault Circuit Interrupters (GFCIs)
- ☐ GFCIs are tested monthly
- ☐ Electrical equipment is properly grounded (3-prong plugs intact)
- ☐ Employees who work on electrical systems are trained and qualified per OSHA 1910.332
- ☐ Lockout/Tagout (LOTO) procedures are established for equipment maintenance
- ☐ LOTO devices are available and employees are trained on their use
- ☐ Electrical rooms and closets are clearly marked and restricted to authorized personnel
- ☐ Portable electrical tools are inspected before each use
- ☐ Damaged electrical equipment is immediately removed from service and tagged "Do Not Use"

⚠ **Common Violation:** Daisy-chaining power strips is one of the most common electrical violations. Each power strip must be plugged directly into a wall outlet. If you need more outlets, hire an electrician to install them properly.

5 Personal Protective Equipment (PPE) Checklist

OSHA requires employers to assess the workplace for hazards that necessitate PPE, provide appropriate PPE at no cost to employees, and ensure proper training on its use.

HAZARD ASSESSMENT

- ☐ A written PPE hazard assessment has been conducted for the workplace (OSHA 1910.132(d))
- ☐ The assessment is certified in writing with the name of the evaluator and date
- ☐ The assessment is updated when new processes, equipment, or hazards are introduced
- ☐ Each job role has been evaluated for PPE requirements

PPE PROVISION & MAINTENANCE

- ☐ All required PPE is provided to employees at no cost
- ☐ PPE fits properly — employees have been fitted individually
- ☐ Replacement PPE is readily available
- ☐ PPE is inspected before each use and defective PPE is replaced
- ☐ PPE storage areas are clean, dry, and accessible

PPE BY HAZARD TYPE

Hazard	Required PPE	OSHA Standard
Impact (falling/flying objects)	Hard hats, safety glasses, face shields	1910.135, 1910.133
Chemical splash/exposure	Goggles, gloves, aprons, face shields	1910.133, 1910.138
Noise (85+ dB TWA)	Earplugs, earmuffs	1910.95
Respiratory hazards	Respirators (requires written program)	1910.134
Fall hazards (6+ feet)	Harnesses, lanyards, guardrails	1926.502

Foot hazards	Steel-toe or safety shoes	1910.136
Hand hazards	Cut-resistant, chemical, or insulated gloves	1910.138
Welding/cutting	Welding helmets, gloves, aprons	1910.252

TRAINING

- ☐ Employees are trained on WHEN PPE is required
- ☐ Employees are trained on HOW to properly put on, adjust, wear, and remove PPE
- ☐ Employees understand the limitations of PPE
- ☐ Employees know proper care, maintenance, useful life, and disposal of PPE
- ☐ Retraining is provided when employees demonstrate misunderstanding or misuse
- ☐ Training is documented with employee signatures and dates

6

Hazard Communication (HazCom) Checklist

The Hazard Communication Standard (HCS) — also called "Right to Know" — requires employers to inform employees about chemical hazards in the workplace. This is consistently one of OSHA's most-cited standards.

- ☐ A written Hazard Communication Program is in place and accessible to all employees
- ☐ A complete inventory of all hazardous chemicals in the workplace has been created
- ☐ Safety Data Sheets (SDS) are available for EVERY hazardous chemical on site
- ☐ SDS binder or digital access point is accessible to all employees during every shift
- ☐ All chemical containers are properly labeled with product name, hazard warnings, and manufacturer info
- ☐ Labels follow the GHS (Globally Harmonized System) format with pictograms, signal words, and hazard statements
- ☐ Secondary containers (spray bottles, buckets) are also labeled
- ☐ Employees are trained on HazCom at time of hire and when new chemicals are introduced
- ☐ Training covers how to read SDS sheets, understand labels, and protect themselves
- ☐ Training covers what to do in case of chemical spill or exposure
- ☐ Training records are documented and maintained
- ☐ Contractors working on-site are informed about chemical hazards in their work areas

SDS Quick Reference: Every SDS has 16 standardized sections. The most critical for employees are: Section 2 (Hazard Identification), Section 4 (First-Aid Measures), Section 5 (Fire-Fighting Measures), Section 6 (Accidental Release/Spill), and Section 8 (Exposure Controls/PPE).

7

Recordkeeping & Documentation Checklist

OSHA requires most employers with 11+ employees to maintain records of workplace injuries and illnesses. Even if you're partially exempt, keeping records is strongly recommended as evidence of your safety program.

REQUIRED OSHA FORMS

- ☐ OSHA Form 300 (Log of Work-Related Injuries and Illnesses) — maintained throughout the year
- ☐ OSHA Form 300A (Summary of Work-Related Injuries and Illnesses) — posted Feb 1 through April 30 annually
- ☐ OSHA Form 301 (Injury and Illness Incident Report) — completed within 7 days of learning of an injury
- ☐ Records are maintained for a minimum of 5 years following the end of the calendar year they cover
- ☐ Electronic submission of injury/illness data is completed annually (if required by establishment size/industry)

ADDITIONAL DOCUMENTATION TO MAINTAIN

- ☐ Written safety policies and procedures
- ☐ Hazard assessments and workplace evaluations
- ☐ Employee training records (dates, topics, attendees, trainer)
- ☐ Equipment inspection and maintenance logs
- ☐ PPE hazard assessment certification
- ☐ Fire extinguisher inspection tags and records
- ☐ Written Hazard Communication Program
- ☐ SDS inventory and sheets
- ☐ Emergency Action Plan
- ☐ Lockout/Tagout (LOTO) procedures (if applicable)
- ☐ Respiratory Protection Program (if respirators are used)
- ☐ Hearing Conservation Program records (if noise exposure exists)

💡 **Pro Tip:** Create a single "OSHA Compliance Binder" (physical or digital) organized with tabs for each category above. During an OSHA inspection, being able to quickly produce documentation demonstrates good faith and can significantly reduce penalties.

Emergency Action Plan Checklist

OSHA requires a written Emergency Action Plan (EAP) for workplaces with 11+ employees (OSHA 1910.38). Even if you have fewer employees, having an EAP is best practice and protects your business.

PLAN COMPONENTS

- ☐ Written Emergency Action Plan is developed and accessible to all employees
- ☐ Procedures for reporting fires and other emergencies are documented
- ☐ Evacuation procedures and emergency escape route assignments are defined
- ☐ Procedures for employees who remain to operate critical equipment before evacuating
- ☐ Procedures to account for all employees after evacuation (assembly point headcount)
- ☐ Rescue and medical duties are assigned to trained employees (or arrangement with external services)
- ☐ Names, titles, and contact info of persons to contact for plan information

EMERGENCY TYPES ADDRESSED

- ☐ Fire or explosion
- ☐ Severe weather (tornado, hurricane, flood)
- ☐ Chemical spill or release
- ☐ Medical emergency
- ☐ Active threat / workplace violence
- ☐ Power outage
- ☐ Bomb threat
- ☐ Earthquake (if in applicable region)

IMPLEMENTATION & TRAINING

- ☐ Floor wardens or evacuation coordinators are designated for each area/floor
-

- ☐ Evacuation maps are posted at key locations throughout the workplace
- ☐ Primary and secondary evacuation routes are identified and marked
- ☐ Assembly point is designated away from the building and communicated to all
- ☐ Procedures for assisting individuals with disabilities during evacuation
- ☐ All employees are trained on the EAP upon hire
- ☐ Refresher training is conducted whenever the plan changes or at least annually
- ☐ Drills are conducted at least annually (quarterly recommended)
- ☐ Drill results are documented including response time and areas for improvement
- ☐ Emergency contact numbers are posted at all phones and in common areas
- ☐ First aid kits are stocked and accessible (checked monthly)
- ☐ AED units are available, accessible, and checked regularly (if provided)
- ☐ At least 2 employees per shift are trained in first aid and CPR

⚠ **Don't Overlook:** If your company uses fire extinguishers as part of the EAP (i.e., you expect employees to fight small fires), you **MUST** provide annual hands-on fire extinguisher training. If your plan is "evacuate only," you can skip hands-on training but must still train on evacuation procedures.

Top 10 OSHA Violations & How to Avoid Them

Every year, OSHA publishes its list of the most frequently cited standards. Here are the top 10 with specific actions to avoid each one.

#	Violation	Standard	How to Avoid It
1	Fall Protection	1926.501	Install guardrails, safety nets, or personal fall arrest systems at 6+ feet. Train all employees working at heights. Inspect fall protection equipment before each use.
2	Hazard Communication	1910.1200	Maintain a written HazCom program, keep SDS for all chemicals accessible, ensure all containers are labeled, and train employees on chemical safety.
3	Ladders	1926.1053	Inspect ladders before each use, maintain 3 points of contact, extend ladders 3 feet above landing, never use damaged ladders, and train employees on safe ladder use.
4	Scaffolding	1926.451	Ensure scaffolds are erected by competent persons, include guardrails and toeboards, inspect before each shift, and train all users.
5	Respiratory Protection	1910.134	Implement a written respiratory protection program, conduct medical evaluations, perform fit testing, and train employees. This is required whenever respirators are used.
6	Lockout/Tagout	1910.147	Develop machine-specific LOTO procedures, train authorized and affected employees, conduct annual inspections, and provide individual locks and tags.
7	Powered Industrial Trucks (Forklifts)	1910.178	Only trained and evaluated operators may drive forklifts. Certification must include classroom, practical, and workplace-specific components. Re-evaluate every 3 years.

8	Fall Protection Training	1926.503	Train each employee who may be exposed to fall hazards. Training must be by a competent person and each employee must demonstrate understanding. Retrain when deficiencies are observed.
9	Eye & Face Protection	1926.102	Conduct a hazard assessment, provide appropriate eye protection (safety glasses, goggles, face shields), ensure ANSI Z87.1 compliance, and train employees.
10	Machine Guarding	1910.212	Guard all moving parts that could cause injury (belts, gears, shafts, blades). Guards must prevent access to the danger zone. Never remove or bypass guards. Inspect regularly.

 **Pro Tip:** Post this top 10 list in your break room. When employees understand WHAT gets companies cited, they become partners in compliance rather than just following rules they don't understand.

Required Postings & Documentation

OSHA requires specific items to be posted in visible locations where employees can see them. Missing postings are easy citations during inspections — and easy to fix.

Mandatory Postings

Posting	Where to Get It	Where to Display
OSHA "Job Safety and Health — It's the Law" poster	Free from osha.gov/publications	Prominent location where employees gather (break room, entrance)
OSHA Form 300A Summary	Completed by employer	Posted Feb 1 – Apr 30 each year in visible location
OSHA citations received	Issued by OSHA inspector	Must be posted at or near the location of the violation for 3 working days or until corrected, whichever is longer
Emergency phone numbers	Created by employer	Near phones and in common areas
Evacuation maps and routes	Created by employer	Hallways, exits, common areas

Additional Required Notices (Federal & State)

- ☐ Federal Minimum Wage poster (Department of Labor)
- ☐ Equal Employment Opportunity (EEO) poster
- ☐ Family and Medical Leave Act (FMLA) poster (if 50+ employees)
- ☐ Employee Polygraph Protection Act poster
- ☐ State-specific labor law posters (vary by state — Texas requires several)
- ☐ Workers' Compensation notice (required in most states)

- ☐ State unemployment insurance information

 **Texas-Specific Note:** Texas does not require workers' compensation insurance, but if you opt out, you must file a notice with the Texas Department of Insurance Division of Workers' Compensation (DWC) and post a notice informing employees. If you DO carry workers' comp, you must also post the coverage notice.

Documentation to Keep on File (Not Posted)

- ☐ Written Hazard Communication Program
- ☐ Written Emergency Action Plan
- ☐ PPE Hazard Assessment (certified in writing)
- ☐ Safety Data Sheets for all chemicals
- ☐ Training records (all safety training)
- ☐ OSHA 300 Log and 301 Incident Reports (5-year retention)
- ☐ Equipment inspection logs
- ☐ Fire extinguisher inspection records
- ☐ Lockout/Tagout procedures (if applicable)
- ☐ Respiratory Protection Program (if applicable)

Inspection Preparation Checklist

OSHA inspections can be scheduled (following a complaint or as part of a targeted program) or unannounced. You have the right to require a warrant, but it's generally better to cooperate. Here's how to be ready.

Before an Inspection Happens

- ☐ Designate a "point person" who will accompany the OSHA inspector
- ☐ Train the point person on their rights and responsibilities during an inspection
- ☐ Create an "OSHA Ready" binder with all required documentation organized and accessible
- ☐ Conduct self-inspections quarterly using this checklist
- ☐ Correct all known hazards before an inspector finds them
- ☐ Ensure all postings are current and visible
- ☐ Verify all training records are up to date
- ☐ Confirm OSHA 300 log is current
- ☐ Ensure SDS sheets are complete and accessible
- ☐ Test all emergency equipment (alarms, extinguishers, eyewash stations)

During the Inspection

- ☐ Ask the inspector for credentials (ID badge and business card)
- ☐ Ask the reason for the inspection (complaint, scheduled, referral, fatality)
- ☐ Accompany the inspector at all times — never leave them unattended
- ☐ Take notes on everything the inspector observes, says, and photographs
- ☐ Take your own photos of everything the inspector photographs
- ☐ Be honest — never lie, hide, or destroy evidence

- ☐ Be cooperative but don't volunteer information beyond what's asked
- ☐ If an employee is interviewed, you have the right to have a representative present (but cannot interfere)
- ☐ Ask for copies of any samples taken
- ☐ Request a closing conference to understand findings

After the Inspection

- ☐ Document everything discussed in the closing conference
- ☐ If citations are issued, you have 15 working days to contest
- ☐ Correct cited hazards by the abatement date
- ☐ Submit proof of abatement (photos, receipts, documentation)
- ☐ Post citations as required
- ☐ Consider requesting an informal conference if penalties seem excessive
- ☐ Use findings to improve your overall safety program

 **Pro Tip:** Good faith effort matters. If an inspector sees that you have a genuine safety program with documentation, training records, and self-inspections, they are far more likely to reduce penalties or issue warnings instead of citations. The goal isn't perfection — it's demonstrable effort.

Employee Training Requirements

OSHA requires training for numerous standards. Lack of training is one of the most common violations — and one of the easiest to prevent. Below is a comprehensive list of training requirements by topic.

Training Topic	Who Needs It	When	Standard
Hazard Communication	All employees exposed to chemicals	At hire + when new chemicals introduced	1910.1200
Emergency Action Plan	All employees	At hire + when plan changes + annually	1910.38
Fire Extinguisher Use	Employees designated to use extinguishers	At hire + annually	1910.157
PPE (all types)	Employees required to use PPE	At hire + when new PPE/hazards + when deficiency observed	1910.132
Bloodborne Pathogens	Employees with potential exposure	At hire + annually	1910.1030
Lockout/Tagout	Authorized + affected employees	At hire + annually (inspection)	1910.147
Forklift Operation	All forklift operators	Before operation + re-evaluation every 3 years	1910.178
Fall Protection	Employees exposed to fall hazards	Before exposure + retrain when deficient	1926.503
Confined Space Entry	Employees entering permit-required spaces	Before entry + when changes occur	1910.146
Respiratory Protection	Employees using respirators	Before use + annually	1910.134
Hearing Conservation	Employees exposed to 85+ dB TWA	At inclusion in program + annually	1910.95

Electrical Safety	Employees working on/near electrical	Before assignment + refresher as needed	1910.332
-------------------	--------------------------------------	---	----------

Training Documentation Checklist

- ☐ Every training session is documented with date, time, and duration
- ☐ Topic and specific content covered is recorded
- ☐ Name and qualifications of the trainer are recorded
- ☐ All attendees sign an attendance sheet
- ☐ Copies of training materials are kept on file
- ☐ Assessment or quiz results are filed (if applicable)
- ☐ Retraining dates are scheduled and tracked
- ☐ Training records are maintained for duration of employment + 1 year minimum

⚠ **Critical:** "We told them" is not training. OSHA requires that employees *understand* the training. You should be able to demonstrate that the training was presented in a language and format employees can understand, and that comprehension was verified.

Incident Reporting Requirements

OSHA has strict requirements for reporting workplace incidents. Failure to report within the required timeframe can result in additional citations and penalties.

Mandatory Reporting to OSHA

Event	Reporting Deadline	How to Report
Fatality	Within 8 hours	Call OSHA at 1-800-321-OSHA (6742) or report online at osha.gov/report
In-patient hospitalization	Within 24 hours	Call OSHA or report online
Amputation	Within 24 hours	Call OSHA or report online
Loss of an eye	Within 24 hours	Call OSHA or report online

⚠ **Important:** These timeframes begin when the employer **LEARNS** of the event, not when it occurs. However, OSHA expects employers to have systems in place to learn about incidents promptly. "I didn't know" is not a valid excuse if you should have known.

OSHA Recordkeeping (Forms 300, 300A, 301)

In addition to reporting severe incidents to OSHA, you must record work-related injuries and illnesses that meet certain criteria.

RECORD THE INJURY/ILLNESS ON OSHA FORMS IF IT RESULTS IN ANY OF THE FOLLOWING:

- ☐ Death
- ☐ Days away from work

- ☐ Restricted work or transfer to another job
- ☐ Medical treatment beyond first aid
- ☐ Loss of consciousness
- ☐ Significant injury or illness diagnosed by a physician (cancer, fracture, punctured eardrum, chronic irreversible disease)
- ☐ Needlestick or sharps injury involving contamination

WHAT COUNTS AS "FIRST AID" (NOT RECORDABLE)

- ☐ Non-prescription medications at non-prescription strength
- ☐ Tetanus immunizations
- ☐ Cleaning, flushing, or soaking wounds on the skin surface
- ☐ Wound coverings (bandages, butterfly closures, Steri-Strips)
- ☐ Hot or cold therapy
- ☐ Non-rigid means of support (elastic bandages, wraps)
- ☐ Temporary immobilization devices for transport
- ☐ Drilling of a fingernail or toenail to relieve pressure
- ☐ Eye patches
- ☐ Removing foreign bodies from the eye with irrigation or cotton swab
- ☐ Finger guards
- ☐ Massage
- ☐ Drinking fluids for heat stress relief

Incident Investigation Best Practices

While OSHA doesn't mandate a specific investigation process, conducting thorough incident investigations protects your employees and your business.

- ☐ Investigate ALL incidents, including near-misses

- ☐ Secure the scene and provide immediate medical attention

 - ☐ Interview witnesses within 24 hours while memories are fresh

 - ☐ Document the scene with photos, diagrams, and notes

 - ☐ Identify root causes (not just blame an individual)

 - ☐ Develop corrective actions with responsible parties and deadlines

 - ☐ Follow up to verify corrective actions were implemented

 - ☐ Share lessons learned with all employees (without identifying injured worker)
-

Official OSHA Resources

Resource	URL	What You'll Find
OSHA Main Website	osha.gov	Standards, publications, reporting
OSHA Small Business Page	osha.gov/smallbusiness	Resources specifically for small businesses
OSHA Free On-Site Consultation	osha.gov/consultation	Free, confidential safety assessment (no citations!)
OSHA Training Institute (OTI)	osha.gov/training	OSHA 10 and OSHA 30 courses
OSHA Publications	osha.gov/publications	Free posters, fact sheets, guides
OSHA Standards Search	osha.gov/laws-regs	Full text of all OSHA standards
Report an Incident	osha.gov/report	Online incident reporting
SDS Search	Various (search by chemical name)	Safety Data Sheets

Best Kept Secret: OSHA's **Free On-Site Consultation Program** is one of the most valuable resources for small businesses. A safety consultant will come to your workplace FOR FREE, evaluate your safety program, identify hazards, and help you fix them — with ZERO risk of citations or penalties. This is separate from OSHA enforcement. Request a consultation at [osha.gov/consultation](https://www.osha.gov/consultation).
